

KACHOUR WALID-RAMZI

Instrumentation & Automation Engineer

Remchi, Tlemcen, Algeria | +213 781 811 940 | kachourwalidramzi@gmail.com

PROFILE

Engineering graduate with a Master's (M2) in Instrumentation and a background in electronics, focused on industrial automation, process control, measurement systems and PLC-based solutions. Practical exposure gained through two internships, including hands-on assembly and soldering work on electronic components and sensors. Currently building PLC skills in Siemens TIA Portal and Factory I/O, alongside parallel experience developing Flutter web applications with Supabase backends. Preparing to enter the industrial automation and instrumentation field, with particular interest in oil & gas, power plants and process industries.

EDUCATION

Master (M2) in Instrumentation — Université Abou Bekr Belkaid, Tlemcen (2026)

- Industrial Instrumentation, Sensors & Measurement, Control Systems, PLC/SCADA Systems, P&ID Standards, Automation.

Bachelor's Degree — Electronics — Université Abou Bekr Belkaid, Tlemcen (2023)

- Electronics, Circuit Analysis, Digital Systems, Microcontrollers, Signal Processing.

EXPERIENCE

Engineering Intern — Khenteur Composants Automobile (Jan-Feb 2025, 15 days)

- Hands-on work assembling components and sensors, including soldering on electronic parts, at an Algerian manufacturer of automotive aftermarket spare parts.

Engineering Intern — S.A.R.L Briqueterie de la Tafna (April 2022, 4 days)

- Introductory internship at a construction-materials manufacturer, gaining early exposure to industrial production processes (clay preparation, molding, drying, firing).

FINAL-YEAR PROJECT (PFE)

CoopMaster — Smart Connected Poultry Coop

- Designed an IoT-based smart automated poultry-coop system centered on a Raspberry Pi, with sensor-driven monitoring, an automated door, camera surveillance and a companion Flutter app.
- Integrated level, flow, rain, motion and weight sensors with local control logic that keeps critical functions working independently of an internet connection.
- Submitted as a Startup-track final-year project under Ministerial Order (Arrêté) 1275.

TECHNICAL SKILLS

- Instrumentation: sensors, transmitters, measurement and 4-20 mA current loops.
- Automation / PLC: Siemens S7-1200 (TIA Portal), Factory I/O, Ladder logic and GRAFCET (currently building these skills).
- Control: PID, process control, feedback systems and regulation.
- Electrical & Engineering: motors, actuators, relays, contactors, control circuits, P&ID, technical documentation.
- Software: Python, Raspberry Pi, Flutter/Dart with Riverpod and Supabase, Firebase, Git/GitHub.

SELF-DIRECTED STUDY (IN PROGRESS)

Personal study, outside any academic program, covering:

- Maintenance types; asynchronous motor starting (direct, star-delta, VFD) and asynchronous vs. synchronous motors.
- Static/safety relays, motor circuit breakers, servo drives, variable speed drives, inductive PNP/NPN sensors, pneumatic distributors, reading electrical schematics, and low-voltage distribution boards (TGBT).
